AutoCAD is used for designing mechanical, electrical, plumbing, and architectural systems, and is sold to end users worldwide. In addition to technical user requirements, AutoCAD is also used to produce many different types of drawings including architectural, electrical, mechanical, plumbing, etc. Automotive industry The automotive industry is one of the largest users of AutoCAD. Vehicle assembly lines and auto body shops are the most common uses. AutoCAD is used to create parts and assembly drawings for the auto industry. According to data from Autodesk, the automotive industry used 712,000 AutoCAD hours in 2016. Architecture, construction, and engineering industries AutoCAD has gained popularity in architecture, construction, and engineering industries. Architects and interior designers use AutoCAD to create detailed drawings of buildings, interior design and exterior spaces. Construction drawings are useful for construction workers to mark and build complex structures. Education AutoCAD is also used in educational settings to teach students the basic principles of design and drafting. It is considered to be a critical learning tool. It provides the tools to develop 3D models and visualize 2D and 3D drawings, supports the integration of data and information from multiple sources, and enables collaboration among various levels of users. Industrial and mechanical design According to data from Autodesk, the industrial and mechanical design industry used 722,000 AutoCAD hours in 2016. The designs created by industrial and mechanical designers include automotive, aircraft, mining, water, and other heavy equipment. According to the American Institute of Architects, the three most popular uses of AutoCAD are: AutoCAD is also widely used in the metal fabrication industry. Organizations According to data from Autodesk, the public sector used 734,000 AutoCAD hours in 2016. It was the second largest segment of the total AutoCAD hours, accounting for 15.9% of the total. According to the organization, over 70% of the world's population lives in developing countries. Therefore, the most important use of AutoCAD is in the area of public service. Government agencies, including local, state, and federal governments, are among the most important users of AutoCAD. In 2016, they used

In 2011, Autodesk released As-a-Service, a cloud-based subscription model for its CAD software. In this model, users pay per drawing hour and all software updates and upgrades are provided at no additional charge. Infrastructure Autodesk acquired the Japanese CAD software company Nucoda in February 2009. Autodesk provides hardware products, such as drawing tablets and laser projectors, and software products such as AutoCAD, AutoCAD LT, CAMWorks, Plant 3D, Pro/E, Revit, Revit Architecture, and 3ds Max. Autodesk provides professional services, such as customer support, architecture, design, engineering, technical consulting, product development and software development for Autodesk software. Software development kit Autodesk launched in March 2007 the Autodesk Digital Media Exchange (DMX) to allow third-party developers to build applications for all the major Autodesk applications. In January 2009, Autodesk released a preview of the new API called the Autodesk Exchange for developers. This was used to develop a plug-in for Autodesk Architectural Desktop for use with Autodesk Revit Architecture, which was released in September 2009. In October 2013, Autodesk released a new API, called the Autodesk Exchange 2013, which is intended for developers of products based on the 2013 release of Revit.
