Users can also use AutoCAD's Export command to export AutoCAD drawing files into other formats. There are also certain applications that can take advantage of AutoCAD, but may not be a part of the AutoCAD product itself. Some of them are: Autodesk Vault is an add-on for AutoCAD that allows the maintenance of information about drawings, models, and other data within an AutoCAD system. Autodesk MDX is a data exchange format for models developed by Autodesk. BIMfile is a BIM exchange format developed by Autodesk. Bibis is a cross-platform software application for collaboration and drafting developed by the Autodesk Architectural Media division. Endpoint Server is an application provided by Autodesk to allow users to receive, search, and send their CAD data to other CAD applications. RealDWG (formerly RealDWG/Mac) is a native Mac application that allows users to view and edit DWG or DXF files created in native DWG or DXF on macOS. History AutoCAD has been developed by different companies. Since 1979, it has been developed by PTC, and in the 1990s, by the Symbolics Corporation. Then, in 1994, PTC sold the AutoCAD product to Micrografx Inc. in order to form a joint venture with HP, which, in turn, was sold to Autodesk in 1996. Visual LISP On June 8, 1994, PTC Software Inc. announced the release of AutoCAD visual LISP (visual Basic for Applications) as a part of a new tool for building custom AutoCAD macros. Its first user, Stuart May, used the macro to print a certificate at his wedding. Visual LISP was created by Larry Benedict, David Richter, and Rob Schmitz. The original code for Visual LISP was released on the Autodesk Developer Network and was updated continuously. Visual LISP was the second industry-standard programming environment for AutoCAD. The first one was AutoLISP, introduced in 1985. Visual LISP was a major change in AutoCAD, which had been designed from the ground up for one user (CAD manager), and one drawing (as opposed to the more typical multi-user and multi-drawing design). Visual LISP is still actively developed for AutoCAD 2000 ca3bfb1094

BillQ: Why does vimrc get loaded with ~/.vimrc? I noticed that ~/.vimrc file get loaded when I run vim. Also the file ~/.vim/vimrc gets loaded, when I run vim. What are the reasons for this? A: Vim reads ~/.vimrc when you start vim, and ~/.vimrc is sourced by the interpreter when it starts up. Thus, if you don't have ~/.vimrc and ~/.vim/vimrc, you don't have vim start up with options. A: /usr/share/vim/vimrc can be sourced on start, while /etc/vim/vimrc can be sourced only on reload. Urological complications of intravenous urography in a non-HIV population: a retrospective study.
